

I am requesting that you reject NAB's petition 04-160. I have been using XM satellite radio for about 3 months now and find that the services are not only terrific, but many of them are not available elsewhere - specifically the instant traffic and weather. In a large city this is invaluable. It's one of the reason I am willing to pay for the service and someone such as the NAB has no business trying to dictate whether or not I can have the service.
